

# KHALED MUWAHED

## Frontend / Full-Stack Developer — React, TypeScript & Node.js

Manchester, UK · muwahedkhaled@gmail.com · 0757 888 0200 · [GitHub](#) · [LinkedIn](#)

### Profile

Full-Stack Developer with 4+ years of professional experience building and maintaining production web applications using React, TypeScript, and Node.js. Strong focus on front-end development, with experience across REST APIs, authentication, databases, testing, CI/CD, and cloud services. Experienced working in Agile teams on production systems across the stack, as well as independently designing, building, and launching full-stack products from concept to production.

### Technical Skills

**Frontend:** React, TypeScript, JavaScript, Next.js, Redux

**Backend:** Node.js, Express, JWT, REST APIs, NestJS

**Databases:** PostgreSQL, MongoDB, MySQL

**Cloud & DevOps:** AWS (S3, Lambda, DynamoDB), Docker, GitHub Actions, CI/CD

**Testing & Tools:** Jest, Vite, Git, GitHub, Jira

**Other:** MQTT, Node-RED, Java, C#

**Methodologies:** Agile/Scrum

### Professional Experience

#### Full Stack Developer | Smart Buildings (EQUANS) | Dec 2021 – Sept 2025

- Built and maintained frontend features using React, Next.js, and TypeScript for internal and client-facing applications.
- Implemented backend REST APIs using Node.js, including authentication, API integration, validation, and error handling.
- Contributed to CI/CD workflows using GitHub Actions and Docker.
- Created automated tests with Jest to improve code quality and reliability.
- Contributed to solutions using AWS S3, Lambda, and DynamoDB as part of serverless architectures.
- Integrated IoT solutions using Node-RED and MQTT for real-time data exchange in building automation.
- Collaborated with designers, product owners, and developers in an Agile/Scrum environment, contributing through code reviews, bug fixes, and feature delivery.

### Front End Developer | Checkd Dev | *May 2021 – Dec 2021*

- Developed responsive user interfaces from **Figma designs** using React and TypeScript.
- Integrated frontend applications with backend APIs, including loading states, validation, and error handling.
- Contributed to backend tasks using **Node.js** within Agile sprint cycles to deliver features.

### Additional Technical Experience

#### AI Training & Evaluation Contributor | Outlier | *Oct 2025 – Present | Occasional work*

- Evaluated AI-generated code and model responses against technical requirements and quality criteria.
- Identified errors and inconsistencies and provided structured feedback on model outputs.
- Created and refined evaluation criteria to assess response accuracy and quality.

### Selected Projects

#### VeloLink — Vehicle Recovery & Transport Platform

##### Independent Product | React · TypeScript · Node.js · Express · PostgreSQL · Stripe · Google Maps · Docker

- Designed and built a full-stack vehicle recovery and transport platform from concept to live production, connecting customers with independent recovery drivers.
- Developed the React/TypeScript frontend and Node.js/Express backend, including REST APIs, customer booking flows, admin workflows, validation, authentication and error handling.
- Integrated **Stripe** for payments, **Google Maps** for location and route functionality, email notifications for operational updates, and **Cloudflare R2** for secure image storage.
- Designed the PostgreSQL data model and implemented the core job, customer, driver, quote, and payment workflows.
- Containerised the development environment with **Docker** and implemented secure handling of customer and job data.
- Took ownership beyond development, including product design, operational workflows, customer acquisition, pricing, and launching the platform as a live business.

#### Wait-Less — Restaurant Management System

##### Production Software | React · TypeScript · NestJS · MongoDB

- Co-built and deployed a restaurant management system with a fellow developer, now used across **4–5 restaurant locations**, supporting approximately **4–8 staff per location**.
- Developed functionality improving communication between front-of-house and kitchen teams, reducing the need for staff to leave the restaurant floor to communicate directly with the kitchen.
- Built frontend functionality with React/TypeScript and backend services with NestJS/MongoDB, including order management and real-time tracking.
- The system has improved operational efficiency and service and contributed to improved business performance.

### Baklava Bliss E-commerce Platform

#### Personal Project | React, Node.js, Express, PostgreSQL, Stripe, Railway, Vercel

- Built a full-stack e-commerce application using React, Node.js, Express, and PostgreSQL.
- Implemented authentication and REST APIs for products, orders, and users.
- Integrated **Stripe Checkout and webhooks** for payment processing.
- Designed the database schema, implemented CRUD operations, deployed using Vercel and Railway, and wrote basic unit tests with Jest.

### Education

BSc Computer Science (First Class Honours) – Manchester Metropolitan University | 2018 – 2021
